## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election of the invention of Group I, claims 1-7, in the reply filed on September 14, 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 8-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on September 14, 2007.

Claims 1-7 have been examined to the extent they read on the elected invention.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunn et al., Drugs and Aging, 2002;19(2):135-161, from IDS filed February 14, 2005, in view of US 6,054,455 ('455).

Dunn et al. teaches tamsulosin as effective in treating abacterial prostatitis (see page 152, Section 4.4). Dunn et al. also teaches that NSAIDs are useful in treating chronic abacterial prostatitis (See page 152, Section 4.4).

Dunn et al. does not expressly teach meloxicam or other NSAID recited as useful in treating abacterial prostatitis.

'455 teaches tachykinin antagonist as useful in treating various prostate conditions including chronic nonbacterial prostatitis (See the abstract). '455 also teaches secondary compounds as useful in treating chronic nonbacterial prostatitis. Such secondary compounds may be used in combination with the tachykinin antagonist (See col. 32, lines 29-47). Within such secondary agents, tamsulosin as well as NSAIDs such as ibuprofen and meloxicam are disclosed (See col. 32, line 62; also col. 33, lines 11-19, especially line 19).

It would have been obvious to one of ordinary skill in the art at the time of invention to incorporate tamsulosin and NSAIDs, especially meloxicam, together in a single composition.

One of ordinary skill in the art would have been motivated to incorporate tamsulosin and NSAIDs, especially meloxicam, together in a single composition. Tamsulosin is known to be effective in treating abacterial prostatitis. NSAIDs are well-known as helpful to treating abacterial prostatitis according to Dunn et al. Furthermore, '455 also discloses that NSAIDs such as meloxicm, are effective in treating abacterial prostatitis. Although the invention of '455 is directed to the tachykinin antagonists treating prostate conditions, possessing the teachings of '455, one of ordinary skill in the art would readily see that numerous agents are also well-known in treating the same prostate conditions. These agents include tamsulosin and NSAIDs. Therefore, combining two agents which are known to be useful to treat abacterial prostatitis individually into a

single composition useful for the very same purpose is prima facie obvious (See *In re Kerkhoven* 205 USPQ 1069 (CCPA 1980)).
